If you have any construction projects that requires our input, or any of our modelling services, please contact us.

What We Do.

AMCA Structures pride ourselves on our ability to reduce project costs through efficient and experienced design and provide a complete draughting service to the steelwork industry.

Using the latest 3D modelling and administration software our team of highly trained detailers and technical managers allow AMCA Structures to deliver detailed steel packages that are practical and accurate.

With a team of friendly and extremely motivated individuals

AMCA Structures offer the complete detailing package. From design to BIM models and an after care service and support during fabrication, installation and beyond, which is second to none in the industry.

STEELWORK WITH INTEGRITY

AMCA Rebranding

From 1st January 2013 AMCA Draughting will be trading as **AMCA Structures Ltd.**

As we embark on yet another New Year, the management team at AMCA has taken this exciting opportunity to rebrand the company profile coinciding with additional services which we can provide.

AMCA are committed to delivering the best solutions to the steelwork and construction industry in the most efficient and practical way possible, indeed, our unwavering commitment to our clients will not change, and will only get better as the team here develops and expands.

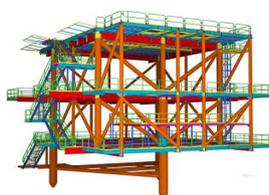

The company rebranding serves in allowing the management team to take the company forward in the right direction and to enhance our services to suit our growing client base, ensuring that our clients are given the best technological support that the industry has to offer.

AMCA Structures will be offering the following additional services in the New Year:

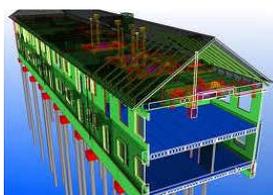

- ◆ BIM Modelling including interface models from our detailing software
- ◆ Project Management in addition to the detailing management
- ◆ BIM Modelling to consultant engineers and architectural practices

Intelligent 3D Modelling

As part of the rebranding AMCA have made the decision to move to Tekla for their 3D modelling software. AMCA have excelled in the industry as one of the top steel detailing companies in the worldwide market. Now is the right time to move forward with the company by adding the Tekla software to what is a well built and structured business.

Working with Tekla software is the most advanced and integrated way to manage detailing, fabrication and erection of all steel structures, such as mining plant, commercial buildings, industrial plant, sports stadiums, pre-engineered buildings including miscellaneous steelwork.

Tekla BIM software provides an accurate, dynamic, and data-rich 3D environment that can be shared by contractors, structural engineers, steel detailers and fabricators, as well as concrete detailers and a host of other construction trades.

For more information on the implementation of Tekla structures and the advantages it can offer contact AMCA Structures.
